

# Interested parties database

Connecting you with distressed asset opportunities

At Quantuma we connect buyers and investors with potential purchases of distressed assets based on their investment preferences. We do this by offering our referral network and professional connections access to register their client's investment preferences on our 'interested parties database'.

As a leading advisory practice with extensive experience in restructuring and insolvency assignments and corporate finance deal structuring, we work across a broad range of industry sectors and with asset types of all values. This means we can connect your clients to all kinds of investment opportunities.

## Here's how it works

1.

### Registering you and your clients

To register to be the first to be made aware of distressed asset investment opportunities, you simply need to complete a quick online form.

To get access to the form simply contact your Quantuma relationship partner.

The form allows you to add your client's investment preferences including

i

If you would prefer that we don't contact your clients directly we can make a note on the database to always share any opportunities with you and you alone.

2.

### New assets and businesses for sale database

We then manage a central database of all businesses and assets for sale where we are appointed. We also have access to other businesses and assets for sale through other 3rd parties.

3.

### Alerting you to opportunities

Once you are on the database, we will then look to match any preferences with assets we are working with.

We will then share details of the asset with you by emailing you a branded document with further details of any assets that you can then in turn share with your client(s).

4.

### Adding new clients

To add new clients on the database you simply need to complete an additional form. We will always connect your details to all client entries

**Warning:** registering on the database or any promotion of any assets will not constitute investment or financial advice.

## How to get in touch

To discuss our interested parties database please get in touch with your usual Quantuma contact.
